

Georgia 06G with white mold sclerotia, mycelia, and tissue damage

Georgia 12Y putting on pods, ~100 DAP in Hampton County. Roughly, it is about 40 days from peg to marketable pod

Left: hopperburn injury  
(yellow V at leaflet tips)

*Courtesy, J. Varn*

Right: chlorotic, yellow  
peanut due to nitrogen  
deficiency following poor  
inoculation.

*The culprit: early leaf spot*  
*The victim: pitiful Ga 06G with no fungicide*  
*The crime: continuous peanut in field for 15+ years, what a world!*

LLS in untreated and  
previously inoculated  
(= sabotaged) plots
