

Peanut Disease Management Trials in 2023

Peanut Belt Research Station

Lewiston-Woodville, North Carolina

LeAnn Lux, Department of Entomology and Plant Pathology, North Carolina State University

David Jordan, Department of Crop and Soil Sciences, North Carolina State University

Ethan Foote, Department of Crop and Soil Sciences, North Carolina State University

Jeffrey Dunne, Department of Crop and Soil Sciences, North Carolina State University

1. Evaluation of Starting Time for Miravis plus Elatus Sprays
2. Miravis plus Elatus Compared with other Fungicide Programs
3. Leaf Spot Control with Varieties and Fungicides
4. Bayer CropScience Fungicide Program versus Commercial Standard
5. Nematode Suppression with Velum and Propulse
6. Pod Loss when Digging is Delayed with and without Rescue Treatments
7. Syngenta Programs (Miravis plus Elatus versus A24733A)
8. FMC Programs (Lucento and Adastrio)
9. BASF Programs (Priaxor and Provysol)
10. ADAMA Programs (Soratel and Vantana)
11. GOWAN Programs (Badge)
12. Rescue Treatments after Hurricane Idalia
13. Influence of Apogee on Leaf Spot with Various Levels of Fungicide Input
14. Timing of Follow Up Fungicide Sprays after Miravis plus Elatus
15. Comparison of Microthiol Disperss Sulfur, Badge, and Chlorothalonil
16. Comparison of Microthiol Disperss Sulfur and Chlorothalonil
17. IPM Programs for Weeds, Arthropods, and Disease in Cereal Rye
18. Leaf Spot Control in Cereal Rye with Microthiol Disperss versus Chlorothalonil
19. Interactions of Fungicides and Kudos Formulations

2nd Late Season Peanut Disease and Harvest Tour

Wednesday, September 27, 1:30 to 3:30 pm

Peanut Belt Research Station, Lewiston-Woodville, NC
