

Plant infected from *Aspergillus* crown rot; visible sooty sporulation

*Courtesy,
Rogan Gibson*

Sprayer contaminated with Duracor (from pasture)

Likely Zorial injury/contamination

Late leaf spot lesion
top of leaf (left) and bottom side (right)

R3 is pegs swelling and forming pods but not yet full size pods, which is then R4 (full size pods)

R2 is at pegging (not yet further developed)

"I'm a little peanut, short and stout, here held in hand, R3 growth stage is out..."
